

CORPORATE HEALTH INNOVATION PROGRAM

Creating a happy, healthy and productive work environment presents a difficult set of choices, and the Corporate Health Innovation Program from the University of Arizona will provide training, services and access to corporate peers to help your company get it right.

Benefits will include executive and HR training, research, white papers and other materials for corporate leaders, managers, health care professionals, architects, designers and more.

The UA Institute on Place and Wellbeing's research program, bringing design and health professionals together to create healthy places, provides evidence-based methods and design tools for optimizing the built environment for health and wellbeing. The CHIP program brings together expertise in business leadership, medicine, building and design professionals and other fields to improve health, wellness, productivity and other key measures for corporations, non-profit organizations, and large-scale institutions.

CHIP has more than 30-years experience in bringing corporate partners together with the research community to study and share best practices. This year it will be under the new leadership of Dr. Esther Sternberg, Director of the University of Arizona Institute on Place and Wellbeing. More information at www.ipw.arizona.edu.
